

## COLUMNS

Through rigorous testing, Black Tie Component's built up post with proprietary construction methods and connections produces post that behave similar to non-spliced post.

- Our columns are only constructed of the highest quality SYP#1 material on the market.
- Our in-ground columns are built with 6' of CCA .60 treated lumber.
- Our columns are constructed with the guidance of ANSI/ASAE/NFBA EP559.2 FEB2023 "Design Requirements and Engineering Properties for Mechanically-Laminated Wood Assemblies."
- We offer options for both in-ground treated columns or all white board columns.
